#### Revisions

Refer to page 338 for the catalogue revision index. Visit [www.bonfiglioli.com](http://www.bonfiglioli.com) to search for catalogues with up-to-date revisions.

## GENERAL INFORMATION

### 1 SYMBOLS AND UNITS OF MEASUREMENT

Symbols	Units of Measure	Description	Symbols	Units of Measure	Description
$A_{n\ 1,2}$	[kN]	Permissible axial force	$P_{TFAN...}$	[kW]	Thermal capacity with the contribution of forced ventilation
$f_s$	–	Service factor	$P_{TSR}$	[kW]	Thermal capacity inclusive of contribution from cooling coil
$i$	–	Gear ratio	$P_{TMCRA...}$	[kW]	Thermal capacity inclusive of contribution from air/oil exchanger cooling unit
$l$	–	Cyclic duration factor	$P_{TMCRW...}$	[kW]	Thermal capacity inclusive of contribution from water/oil exchanger cooling unit
$J$	[Kgm <sup>2</sup> ]	Mass moment of inertia	$R_{c\ 1,2}$	[kN]	Calculated radial force
$M_{1,2}$	[Nm]	Torque	$R_{n\ 1,2}$	[kN]	Permissible overhung load
$M_{c\ 1,2}$	[Nm]	Calculated torque	$t_a$	[°C]	Ambient temperature
$M_{n\ 1,2}$	[Nm]	Rated torque	$t_s$	[°C]	Surface temperature
$M_{r\ 1,2}$	[Nm]	Torque demand	$t_o$	[°C]	Oil temperature
$n_{1,2}$	[min <sup>-1</sup> ]	Speed	$\eta$	–	Efficiency
$P_{1,2}$	[kW]	Power			<sub>1</sub> value applies to input shaft
$P_{n\ 1,2}$	[kW]	Rated power			<sub>2</sub> value applies to output shaft
$P_{r\ 1,2}$	[kW]	Power demand			
$P_T$	[kW]	Overall thermal capacity			

## 2 GENERAL DESIGN FEATURES

Gear units of the HDP and HDO series make optimum use of advanced design features, to offer:

- Top torque density
- Superior performance
- Silent and vibration-free operation
- Total ruggedness and reliability
- Lifetime calculation in accordance with the applicable ISO and AGMA standards
- Extensive customisation through a wide range of options offered in the catalogue

## 3 ALLOWED TEMPERATURE LIMITS

Symbols	Description / Condition	Value (*)	
		Synthetic Oil	Mineral Oil
$t_a$	Ambient temperature		
$t_{au \text{ min}}$	Minimum operating ambient temperature	<b>-30°C</b>	<b>-10°C</b>
$t_{au \text{ Max}}$	Maximum operating ambient temperature	<b>+50°C</b>	<b>+40°C</b>
$t_{as \text{ min}}$	Minimum storage ambient temperature	<b>-40°C</b>	<b>-10°C</b>
$t_{as \text{ Max}}$	Maximum storage ambient temperature	<b>+50°C</b>	<b>+50°C</b>
$t_s$	Surface temperature		
$t_{s \text{ min}}$	Minimum gearbox surface temperature starting with partial load (#)	<b>-25°C</b>	<b>-10°C</b>
$t_{sc \text{ min}}$	Minimum gearbox surface temperature starting with full load	<b>-10°C</b>	<b>-5°C</b>
$t_{s \text{ Max}}$	Maximum casing surface temperature during continuous operation (measured next to the gearbox input)	<b>+100°C</b>	<b>+100°C (@)</b>
$t_o$	Oil temperature		
$t_{o \text{ Max}}$	Maximum oil temperature during continuous operation	<b>+95°C</b>	<b>+95°C (@)</b>

(\*) = Refer to the table "Selection of the optimal oil viscosity" for further information about minimum and maximum values of different oil viscosity and for using hydraulic circuits. For values of  $t_a < -20^\circ\text{C}$  and  $t_s, t_o > 80^\circ\text{C}$ , choose (as permitted in the product configuration stage) the sealing type of the most suitable material to the type of application. If needed contact Bonfiglioli Technical Service.

(@) = Continuous operation it is not advised if  $t_s$  and  $t_o$  range is  $80^\circ\text{C}$  to  $95^\circ\text{C}$ .

(#) = For full load start-up it is recommended to ramp-up and provide for greater absorption of the motor. If needed, contact Bonfiglioli Technical Service.

## 4 INSTALLATION

The following installation instructions must be observed:

- Make sure that the gearbox is correctly secured to avoid vibrations. If shocks or overloads are expected, install hydraulic couplings, clutches, torque limiters, etc.
- Before the eventual painting, the machined surfaces and the outer face of the oilseals must be protected to prevent paint drying out the rubber and jeopardising the oil-seal function.
- Components to be keyed on to the gearbox output shafts should be machined to ISO H7 tolerances to prevent mating surfaces jamming and causing irreparable damage to the gearbox during installation. Suitable pullers and extractors should also be used to fit and remove such components. These should be properly secured to the threaded hole at the end of the shafts. The customer is required to verify the mating on the output shaft defining appropriate tolerances according to the torque to be transmitted.
- Mating surfaces must be cleaned and treated with suitable protective products before mounting to avoid oxidation and, as a result, seizure of parts.
- Prior to putting the gear unit into operation make sure that the equipment that incorporates the same complies with the current revision of the Machines Directive 2006/42/CE.
- Before starting up the machine, make sure that oil level conforms to the mounting position specified for the gear unit and viscosity is suitable for the specific application.
- For outdoor installation provide adequate guards in order to protect the drive from rainfalls as well as direct sun radiation.

## 5 LUBRICATION

Refer to the User's Manual available at [www.bonfiglioli.com](http://www.bonfiglioli.com) for indications about checking the oil level and its replacement.

Do not mix mineral oils with synthetic oils and/or different brands.

However, oil level should be checked at regular intervals and topped up as required.

Check monthly if unit operates under intermittent duty, more frequently if duty is continuous.

### 5.1 Selection of the optimal oil viscosity (data relating to Shell Oils)

		Operating ambient temperature [C°]																		
		-40	-35	-30	-25	-20	-15	-10	-5	0	+5	+10	+15	+20	+25	+30	+35	+40	+45	+50

Recommended operating limits

Allowed operating limits. ☎

Forbidden operating limits.

\* = It is recommended to ramp-up and to provide for greater absorption of the motor.

If needed and in the event of impulse loads, contact Bonfiglioli Technical Service. ☎

## 5.2 Lubrication for HDP-HDO series gearboxes

The internal parts of HDP gearboxes are lubricated with a mixed immersion and splash system. Should the output speed be lower than  $1 \text{ min}^{-1}$  or the input speed greater than  $1800 \text{ min}^{-1}$ , please contact Bonfiglioli Technical Service for advise.

In mounting position V5, the top bearings in gearbox sizes HDP 60 to HDP 90 are pre-lubricated with grease and fitted with Nilos seals, unless the order specifies a forced lubrication system with mechanical pump (optional variants OP1, OP2) or electric pump (option MOP).

If HDP 100 to 180 gearboxes have to be installed in mounting position V5, with the output shaft vertical, one of the above mentioned forced lubrication systems must be specified. The actual system should be selected on the basis of speed and/or operating conditions.

These gearboxes are supplied without lubricant. It is the customer's responsibility to fill them with the appropriate amount of oil before start-up.

The internal parts of HDO gearboxes are lubricated with a mixed immersion and splash system. Should the output speed be lower than  $1 \text{ min}^{-1}$  or the input speed greater than  $1800 \text{ min}^{-1}$ , please contact Bonfiglioli Technical Service for advise.

In mounting position V5, the top bearings in gearbox sizes HDO 71 to HD0 95 are pre-lubricated with grease and fitted with Nilos seals.

If HDO 100 to 180 gearboxes have to be installed in mounting position V5 it is required that the order specifies a forced lubrication system with mechanical pump (optional variants OP1, OP2) or electric pump (option MOP).

Depending on the configuration and mounting position, HDO gearboxes may require one of a number of forced lubrication systems described later in this catalogue.

The gearboxes are supplied without lubricant. It is the customer's responsibility to fill them with the appropriate amount of oil before start-up.

## 6 STORAGE

Observe the following instructions to ensure correct storage of the products:

- Do not store outdoors, in areas exposed to weather or with excessive humidity.
- Always place boards, wood or other material between the products and the floor. The gearboxes should not have direct contact with the floor.
- In case of long-term storage all machined surfaces such as flanges, shafts and couplings must be coated with a suitable rust inhibiting product (Tectile 506 EH or equivalent). Furthermore gear units must be placed with the fill plug in the highest position and filled up with oil. Before putting the units into operation the appropriate quantity, and type, of oil must be restored.

## 7 CONDITIONS OF SUPPLY

Gear units are supplied as follows:

- configured for installation in the mounting position specified when ordering;
- tested to manufacturer specifications;
- mating machined surfaces come unpainted;
- nuts and bolts for mounting motors are provided if a flanged motor input is specified.

## 8 PAINT COATING

HDP gearboxes in sizes 60 to 90 and HDO in sizes 71 to 95 are externally and internally painted in oven hardened epoxy resin and polyester powder paint. The painted (ferrous) surfaces of these gearboxes are protected to at least corrosivity class C2 (UNI EN ISO 12944-2). The colour is RAL 7042 grey. A synthetic top coat may be applied later.

HDP and HDO gearbox sizes 100 to 180 are internally and externally spray painted with an epoxy primer, and then externally painted on completion of assembly. These gearboxes are protected to at least corrosivity class C3 (UNI EN ISO 12944-2). The colour is RAL 7042 grey.

## 9 SERVICE FACTOR

Service factors listed here under are empirical values based on AGMA and ISO specifications as well as our experience for use in common applications. They apply for state of the art-designed driven machines and normal operating conditions.

Application	≤ 10 hours/day	> 10 hours/day
<b>AGITATORS, MIXERS</b>		
Pure liquids	1.25	1.50
Liquids and solids	1.25	1.50
Liquids - variable density	1.50	1.75
<b>BLOWERS</b>		
Centrifugal	1.00	1.25
Lobe	1.25	1.50
Vane	1.25	1.50
<b>CLARIFIERS</b>	1.00	1.25
<b>CLAY WORKING MACHINERY</b>		
Brick press	1.75	2.00
Briquette machine	1.75	2.00
Pug mill	1.25	1.50
<b>COMPACTORS</b>	2.00	2.00
<b>COMPRESSORS</b>		
Centrifugal	1.25	1.50
Lobe	1.25	1.50

# 40		Paint coating					
# 41		To specific requests for testing					
<b>G ) NOTES</b>							
# 42		Notes and additional Customer requirements:					
# 43		PLP number if present for Special Gearbox					
#		Mandatory for the selection					

The selection of the drive unit can only be optimized upon knowing both the engineering and the environmental conditions the gearbox will operate into.

## 10 ENGINEERING SELECTION

1. First determine the gear ratio:

$$i = \frac{n_1}{n_2}$$

2. Calculate the power  $P_{r1}$  required at the input shaft:

$$P_{r1} = \frac{M_{r2} \times n_2}{9550 \times \eta}$$

	$\eta$
2x	0.96
3x	0.94
4x	0.92

3. Determine the applicable service factor  $f_s$  and the adjusting factor  $f_m$  depending on prime mover:

	$f_m$
Electric motor Hydraulic motor Turbine	1.00
Multi-cylinder internal combustion engine	1.25
Single cylinder internal combustion engine	1.50

4. Use the rating charts to select the gear unit with the gear ratio nearest to that calculated, and with a rated power  $P_{n1}$ , so that:

$$P_{n1} \geq P_{r1} \times f_s \times f_m$$

## 11 VERIFICATIONS

### 11,1 SHOCK LOADING

For intermittent duty, impact/shock loading applications or start-ups under full load or with high inertial loads, make sure the following condition is satisfied for momentary peak torque  $M_p$  generated during the operating cycle:

$$M_p \leq M_{n2ref} \times f_p$$

Peaks/hour		$f_p$				
		1	2 ... 10	11 ... 50	51 ... 100	> 100
Drive	Constant direction	2.0 1.8 (HDO 71...95 3x  1.6 (HDO 71...95 4x 	1.6	1.3	1.1	1.0
	Reversals	1.4 1.3 (HDO 71...95 3x  1.1 (HDO 71...95 4x 	1.1	0.9	0.8	0.7

For configuration S (output shaft with shrink disc), use the following values to verify applicability.

Peaks/hour		$f_p$		
		1 ... 50	51 ... 100	> 100
Drive	Constant direction	1.3 1.1 (HDP 80) 1 (HDO 81) 1.2 (HDO 95)	1.1 1 (HDO 81)	1.0
	Reversals	0.9 0.8 (HDP 80 - HDO 95) 0.7 (HDO 81)	0.8 0.7 (HDO 81)	0.7

If the above condition is not satisfied, consider installing a torque limiter or selecting a gear unit of the next size up.

### 11,2 MOTOR MOUNTING

Verify that the appropriate motor adapter is available for the selected gear unit. See sections [15.5](#) and [26.6](#).

Because of standardisation, the rated power of the electric motor selected might be greater than power  $P_{r1}$  actually requested by the application. Make sure that the electric motor will never develop the extra power at any stage of the operating cycle. If you have any doubts about the validity of the application data, or uncertainty concerning the actual load pattern, install a torque limiting device or proportionally revise the applicable service factor.

### 11,3 BACKSTOP DEVICE

If the gear unit is specified with a backstop, verify the load capacity of the device at sections 15.6.3 and 26.7.3 of this catalogue and make sure the torque  $M_{1MAX}$  is never exceeded in operation.

### 11,4 CALCULATING THE RESULTING OVERHUNG LOAD

External transmissions keyed onto input and/or output shaft generate loads that act radially onto same shaft.

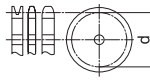

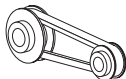

Resulting shaft loading must be compatible with both the bearing and the shaft capacity.

Namely shaft loading ( $R_{c1}$  for input shaft,  $R_{c2}$  for output shaft), must be equal or lower than admissible overhung load capacity for shaft under study ( $R_{x1}$  for input shaft,  $R_{x2}$  for output shaft). OHL capability listed in the rating chart section.

The procedure described above applies to both the input shaft and the output shaft, but care must be taken to apply factor  $K_1$  or factor  $K_2$  to suit the particular shaft.

The load generated by an external transmission can be calculated, to a good approximation, by the following equation:

$$R_c = \frac{2000 \times M \times K_r}{d}$$

$K_r = 1$		$M$ [Nm]	
$K_r = 1.25$		$d$ [mm]	
$K_r = 1.5 - 2.0$			

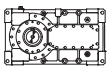

## 11,5 OVERHUNG LOADING VERIFICATION

The  $R_{n1 \max}$  values listed in the table are the maximum permissible overhung loads; these loads may have to be reduced in certain applications.

For an exact value, please contact Bonfiglioli's Technical Service.

## 11,6 SHAFT LOADING

### 11.6.1 Overhung load on the output shaft

Make sure that the overhung load on the output shaft does not exceed the maximum permitted value for the gearbox in question. The HDB option can be specified only for HDP gearbox sizes 60 through 90 to provide higher capacity bearings to cater for particularly large overhung loads. If external loads exceed the load capacity of even the heavy duty bearings, consider the options of providing external support for the shafts, reducing external load in some other way, or, if necessary, selecting a gearbox of the next size up.

To check overhung load capacity, refer to the figure in section 11.5 and compare the actual overhung load  $R_c$  on the shaft with the maximum permissible overhung load  $R_x$  for the distance from the centre of the shaft at which the load is applied. Maximum permissible overhung load  $R_{x2}$  for the output shaft is obtained by multiplying the nominal overhung load  $R_{n2}$ , as listed in the technical data section, by the load location factor  $K_2$ .

Rated overhung loads  $R_n$  are conservative values, as they are calculated for the most unfavourable conditions in terms of direction of rotation and angle of application of the force on the shaft.

The following table shows the rated overhung loads that can be applied to solid (LP) output shafts under the following conditions:

- force applied to the centre of the end of the shaft
- no thrust loads
- gearbox service factor  $\geq 1.25$

Contact Bonfiglioli Riduttori's Technical Service if an exact calculation is required.

	$R_{n2}$ [kN]

<b>HDP 170 - HDO 170</b>	 BONFIGLIOLI TECHNICAL SERVICE					
<b>HDP 180 - HDO 180</b>						

For other load conditions, such as:

- high overhung loads
- thrust loads
- combined overhung and thrust loads
- different output shaft configurations

consult Bonfiglioli Riduttori's Technical Service.

### 11.6.2 Overhung and thrust loads on input shaft

When checking the overhung load capacity refer to scheme shown at paragraph 11.5. Calculate the admissible overhung load **R<sub>x</sub>** that is relevant to the distance the force applies from shaft midpoint and compare this with the force **R<sub>c</sub>** that acts onto the shaft. Multiply the nominal radial load **R<sub>n1</sub>**, as listed in the technical data section, for the load location factor **K<sub>1</sub>** to get the permissible overhung load **R<sub>x1</sub>** for the output shaft.

Rated overhung loads **R<sub>n</sub>** are calculated for the most unfavourable condition as far as direction of rotation and the angle the force applies onto the shaft. Catalogue values are therefore conservative, for an in-depth calculation, or in case of HDP with 4 reductions and through-shafts (LD, RD and DD), contact the Technical Service of Bonfiglioli Riduttori.

When a radial force applies a thrust load **A<sub>n1</sub> ≤ 0.2 x R<sub>n1</sub>** is also permitted.

In the case of HDP gearboxes with through-shafts the maximum permitted overhung load refers to the shaft end highlighted in black below:

<b>HDP</b>			2x	3x	4x
<b>LL</b>		<b>LR</b>		<b>LD</b>	
<b>RL</b>		<b>RR</b>		<b>RD</b>	
<b>DL</b>		<b>DR</b>		<b>DD</b>	

If an overhung load is applied to both shaft ends, contact Bonfiglioli Riduttori's Technical Service for advise.

## 11,7 THERMAL CAPACITY

Thermal power  $P_T$  is the maximum power that the gearbox can transmit mechanically, under continuous operation, without the internal temperature rising to a value that could damage the gearbox components.

Under the following operating conditions:

- mounting position B3, gearbox connected through a metallic support
- continuous functioning
- installation in large areas (air speed > 1.4 m/s)
- max. installation altitude 1000 m

total thermal capacity values and thermal capacity values inclusive of contributions from auxiliary cooling units are listed in sections [17](#) and [28](#).

For other conditions contact Bonfiglioli's Technical Service.

The figure determined must be greater than the  $Pr_1$  power value for the gearbox input shaft. It is therefore important to verify the following formula:

$$P_{T...} \geq Pr_1$$

## 12 SAMPLE APPLICATIONS

	Application data	
	$n_1 = 1500 \text{ min}^{-1}$	$f_s = 1.5$
	$n_2 = 83 \text{ min}^{-1}$	$Mr_2 = 7850 \text{ Nm}$
	Mounting position: <b>B3</b>	
	Environmental conditions	
Ambient temperature = $40^\circ\text{C}$		
Installation in large areas		

### Product selection:

$$\text{a) } i = \frac{n_1}{n_2} = \frac{1500}{83} \approx 18.1$$

$$\text{b) } Pr_1 = \frac{Mr_2 \times n_2}{9550 \times \eta} = \frac{7850 \times 83}{9550 \times 0.96} \approx 71.1 \text{ kW}$$

$$\text{c) } Pn_1 \geq Pr_1 \cdot f_s \approx 106.6 \text{ kW}$$

**HDP 80 2 18.0 LP LR VP B3**

[ $Pn_1 = 108.7 \text{ kW @ } n_1 = 1500 \text{ min}^{-1}$ ]

### Thermal capacity check:

$$P_T = 55 \text{ kW} < Pr_1 = 71.1 \text{ kW}$$

### Option 1

- Fan cooling

$$P_{TFANL/R} = 76 \text{ kW @ } n_1 = 1500 \text{ min}^{-1}$$

$$P_{TFANL/R} > Pr_1$$

✓ OK

### Option 2

- Cooling coil

$$P_{TSR} = 96 \text{ kW @ } n_1 = 1500 \text{ min}^{-1}$$

$$P_{TSR} > Pr_1$$

✓ OK

	Application data	
	$n_1 = 1500 \text{ min}^{-1}$	$f_s = 1.5$
	$n_2 = 120 \text{ min}^{-1}$	$Mr_2 = 13500 \text{ Nm}$
	Mounting position: <b>B3</b>	
	Environmental conditions	
	Ambient temperature	= 40°C
Installation in large areas		

### Product selection:

a)  $i = \frac{n_1}{n_2} = \frac{1500}{120} = 12.5$     b)  $Pr_1 = \frac{Mr_2 \times n_2}{9550 \times \eta} = \frac{13500 \times 120}{9550 \times 0.96} \approx 176.7 \text{ kW}$     c)  $Pn_1 \geq Pr_1 \cdot f_s \approx 265.1 \text{ kW}$

**HDO 110 2 12.5 LP L 1 VP B3**

[ $Pn_1 = 329.4 \text{ kW @ } n_1 = 1500 \text{ min}^{-1}$ ]

### Thermal capacity check:

$P_T = 52 \text{ kW} < Pr_1 = 176.7 \text{ kW}$

### Option 1

- Cooling units with air/oil heat exchanger

$P_{TMCR A9} = 184 \text{ kW @ } n_1 = 1500 \text{ min}^{-1}$

$P_{TMCR A9} > Pr_1$

✓ OK

### Option 2

- Cooling units with water/oil heat exchanger

$P_{TMCR W5} = 250 \text{ kW @ } n_1 = 1500 \text{ min}^{-1}$

$P_{TMCR W5} > Pr_1$

✓ OK

## GEAR UNITS ATEX CONFIGURATION

### 13 INTRODUCTION TO THE ATEX DIRECTIVES

#### 13.1 Explosive atmosphere

An **explosive atmosphere** for the purposes of Directive 2014/34/EU is defined as a mixture:

- a. of **flammable substances**, in the form of gases, vapours, mists or dusts;
- b. with **air**;
- c. under atmospheric conditions;
- d. in which, after ignition, the combustion spreads to the entire unburned mixture (it has to be noted that sometimes, mainly with dust, not always the whole quantity of the combustible material is consumed by the combustion).

An atmosphere, which could become explosive due to local and/or operational conditions is called a **potentially explosive atmosphere**.

It is only in this kind of potentially explosive atmosphere which products falling under the Directive 2014/34/EU are designed for.

#### 13.2 European harmonised atex standards

Directive 2014/34/EU stipulates the minimum safety requirements for products intended for use in explosion risk areas within the member countries of the European Union. The directive also assigns such equipment to **categories**, which are defined by the directive itself.

The following table describes the **zones** into which the user of a plant, in which an explosive atmosphere may occur, is required to divide the equipment application areas.

Zones		Formation frequency of a potentially explosive atmosphere	Type of danger
Gaseous atmosphere G	Dusty atmosphere D		
0	20	Present continuously or for long periods	Permanent
1	21	Likely to occur in normal operation occasionally	Potential
2	22	Not likely to occur in normal operation but if it does occur will persist for short period only	Minimal

**BONFIGLIOLI RIDUTTORI gear units selected in this catalogue are marked (marking and data on the plate) and are suitable for installation in zones 1, 21, as highlighted in light gray in the above diagram. With the same marking they may of course also be installed in areas (minor risk) 2 and 22, highlighted in dark gray in the above diagram. Contacting our sales department, a special marking on the plate for the same zones 2 and 22 can be requested.**

As from 20 April 2016 the ATEX directive 2014/34/EU come into force throughout the entire European Union, and replace existing conflicting national and European laws on explosive atmospheres and the previous directive 94/9/EC.

The directives apply to mechanical, hydraulic and pneumatic equipment.

### 13.3 Levels of protection for the various categories of equipment

The various categories of equipment must be able to operate in conformity with the Manufacturer's operational specifications, at certain defined levels of protection.

The availability of BONFIGLIOLI RIDUTTORI products is highlighted in grey.

Protection level	Category		Type of protection	Operating conditions
	Group I	Group II		
Very high	M1		Two independent means of protection or safety capable of operating even when two independent faults occur	The equipment remains powered and operational even in the presence of an explosive atmosphere
Very high		1	Two independent means of protection or safety capable of operating even when two independent faults occur	The equipment remains powered and operational in zones 0, 1, 2 (G) and/or zones 20, 21, 22 (D)
High	M2		Protection suitable for normal operation and heavy duty conditions	Power to the equipment is shut off in the presence of a potentially explosive atmosphere
High		2	Protection suitable for normal operation and frequent faults or equipment in which malfunction is normal.	The equipment remains powered and operational in zones 1, 2 (G) and/or zones 21, 22 (D)
Normal		3	Protection suitable for normal operation	The equipment remains powered and operational in zones 2 (G) and/or 22 (D)

### 13.4 Definition of groups

**Group I** Applies to equipment intended for use underground in parts of mines and those parts of surface installations of such mines, liable to be endangered by fire damp and/or combustible dust.

**Group II** Applies to equipment intended for use in other places liable to be endangered by explosive atmospheres.

BONFIGLIOLI RIDUTTORI products may not therefore be installed in mines, classified in **Group I** and in **Group II**, category 1.

To summarise, the classification of equipment in to groups, categories and zones is illustrated in the table below, where by the availability of BONFIGLIOLI RIDUTTORI products is highlighted in grey.

Group	I		II					
	mines, firedamp		other potentially explosive areas (gas, dust)					
Category	M1	M2	1		2		3	
Atmosphere <sup>(1)</sup>			G	D	G	D	G	D
Zone			0	20	1	21	2	22
Type of protection gear unit <sup>(2)</sup>					c, k	c, k	c, k	c, k

(1) **G** = gas    **D** = DUST

(2) as per EN13463

### 13.5 Declaration of conformity

The Declaration of Conformity, is the document which attests to the conformity of the product to Directive 2014/34/EU.

The validity of the Declaration is bound to observance of the instructions given in the User, Installation and Service Manual for safe use of the product throughout its service life.

This can be downloaded from [www.bonfiglioli.com](http://www.bonfiglioli.com) where the manual is available in PDF format in a number of languages.

The instructions regarding ambient conditions are of particular importance inasmuch as failure to observe them during operation of the product renders the certificate null and void. In case of doubt regarding the validity of the certificate of conformity, contact the BONFIGLIOLI RIDUTTORI technical department.

## PARALLEL SHAFT GEAR UNIT SERIES HDP

HDP

### 14 DESIGN FEATURES

The main construction features of the HDP parallel shaft gear unit range are:

- sizes from HDP 60 to HDP 90 with double and triple reduction.
- sizes from HDP 100 to HDP 180 with double, triple and quadruple reduction.
- Favourable distribution of rated torque values across the entire ratio range.
- Gear ratios in a 12% progression between consecutive values.
- HDP 60 ... HDP 125: Monobloc housing in rigid, spheroidal cast iron, paint coated both internally and externally. Universal mounting thanks to the many machined surfaces. Profiles and dimensions optimised by FEM analysis for superior structural rigidity and low acoustic emissions.
- HDP 130 ... HDP 180: housing in spheroidal cast iron or electrically-welded steel, horizontally split. This design makes maintenance quick and economical. Profiles and dimensions optimised by FEM analysis for superior structural rigidity and low acoustic emissions.
- Casehardened and hardened alloy steel helical gears ground finished and with profile corrected for:
  - more silent operation and smoother transmission of high speed input gears
  - maximum transmissible torque of the lower speed output gear reductions
- Input shafts generally casehardened and ground finished on outer diameter. Output shafts from hardened and tempered alloy steel.

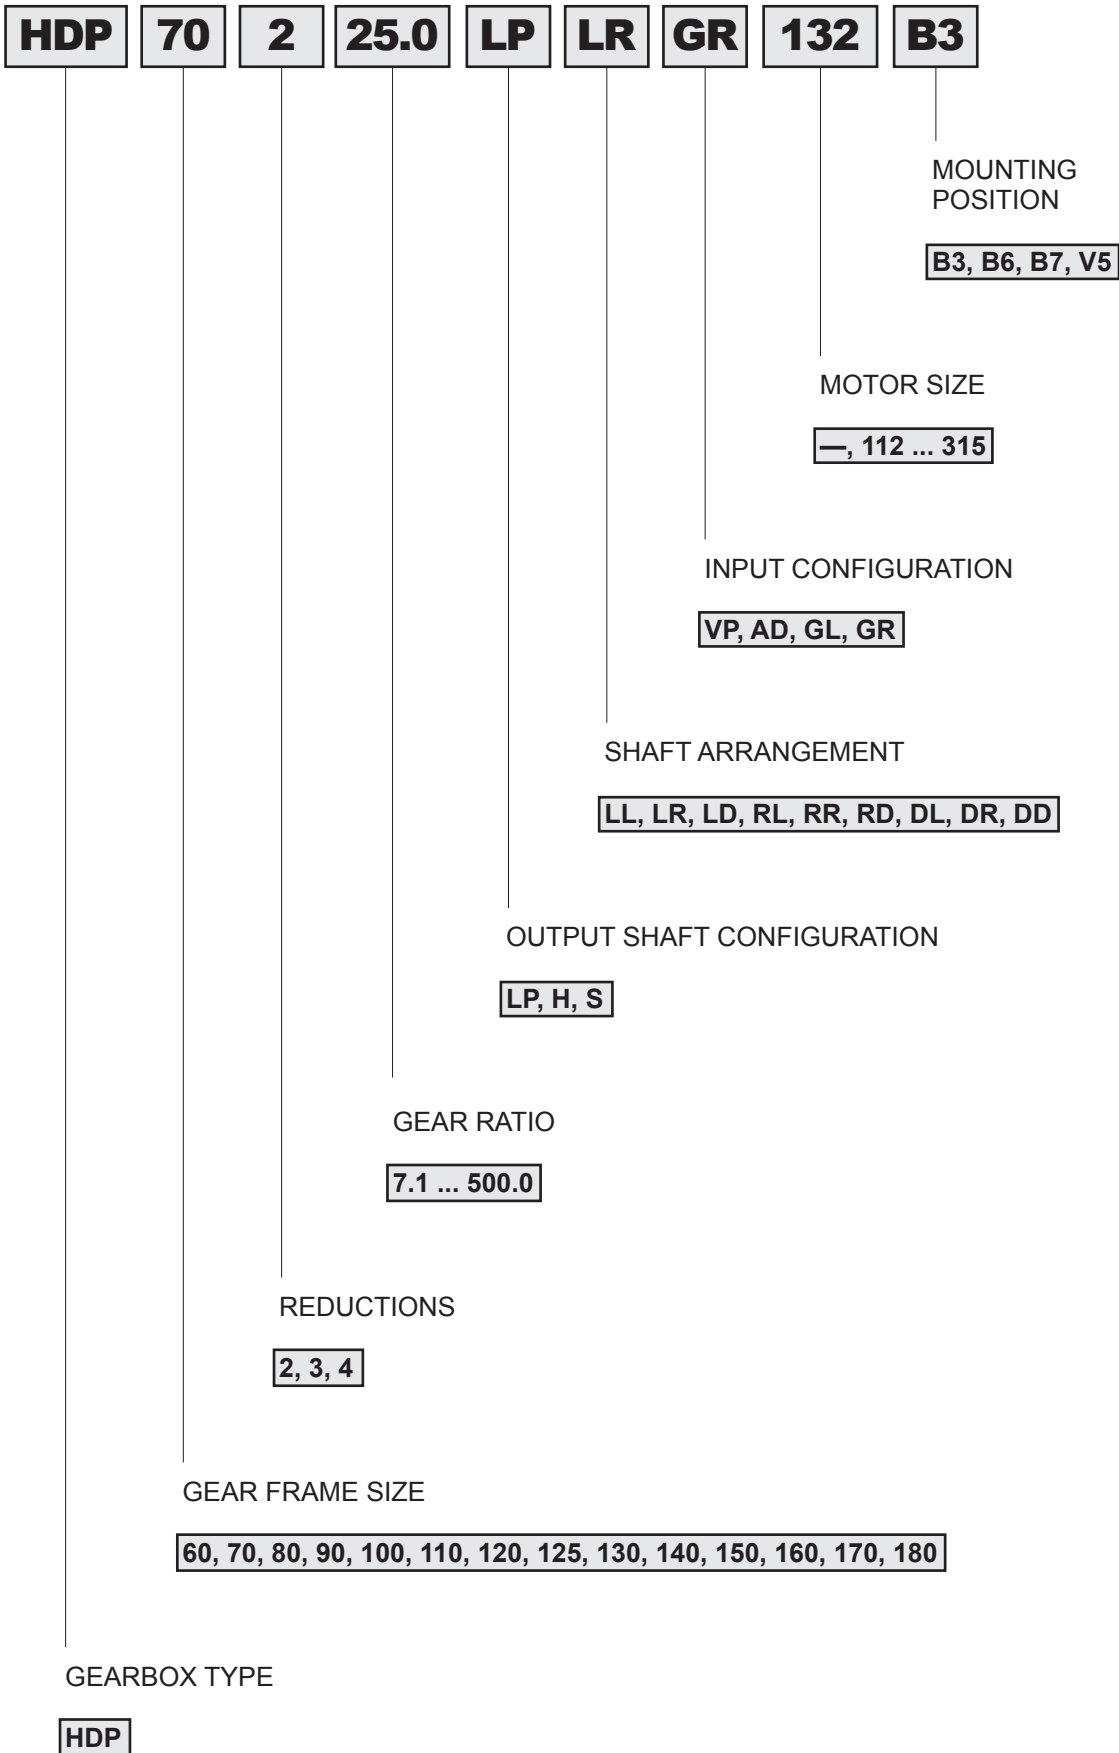

- Input shaft configurations:
  - HDP 60 ... HDP 180: solid, single or double-sided shaft with dimensions to UNI/ISO 775-88
  - HDP 60 ... HDP 90: direct motor mounting or lantern housing and flexible coupling provision.
  - HDP 100 ... HDP 180: motor mounting with bell and housing and flexible coupling.
- Output shaft configurations:
  - solid, single or double-sided shaft with dimensions to UNI/ISO 775-88
  - hollow shaft with keyway
  - hollow shaft with shrink disc
- Heavy duty taper roller bearings or extra large self-aligning roller bearings from the most reputed brands for unparalleled overhung load capacity.
  
- A wide range of customisation options are available upon request, including:
  - auxiliary cooling/heating devices
  - forced lubrication systems
  - backstop device
  - mounting or manifold flanges
  - bearings for increased overhung load capacity (only for HDP 60 ... HDP 90)
  - seals and gaskets in various types and materials
  - sensors
  - dry-well device for vertical shaft installations
  - fixing elements

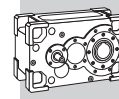

15 PRODUCT CONFIGURATIONS

15.1 BASE VARIANTS

HDP

## 15.2 OPTIONAL VARIANTS

REMARK: The multiple selection of some of the variants may be subject to technical or dimensional constraints. Consult with the factory to have your selection approved.

### 15.3 MOUNTING POSITION

HDP

### 15.4 INPUT AND OUTPUT CONFIGURATION

#### 15.4.1 OUTPUT SHAFT CONFIGURATION

#### 15.4.2 INPUT CONFIGURATION

On the input side the gear unit can be arranged in either one of the configurations described here after:

- **Solid input shaft**, single- or double-sided – Specify **VP**
- **Motor flange mounting** for an IEC-standard electric motor with IM B5 flange. The option is only applicable to units HDP 60... HDP 90 in the triple reduction configuration – Specify **AD**.
- **Motor mounting through bell housing and flexible coupling**. The option is designated **GL** or **GR** depending on what side of the gear unit the coupling is mounted. The flexible coupling is within the scope for supply.

## 15.5 MOTOR AVAILABILITY

The following charts list the motor/gearbox combinations that are geometrically feasible. Variants are only applicable if either an AD (direct motor mounting) or a GL / GR input configuration (coupling through bell housing and flexible coupling) were previously specified within the ordering code.

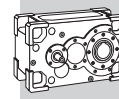

Because of standardisation, the rated power of the electric motor selected might be greater than nominal power  $P_{n1}$  of chosen gearbox. Make sure that the electric motor will never develop the extra power at any stage of the operating cycle. If you have any doubts about the validity of the application data, or uncertainty concerning the actual load pattern, install a torque limiting device or proportionally revise the applicable service factor.

	Input configuration

## 15.6 OPTIONAL VARIANTS

### 15.6.1 AUXILIARY COOLING DEVICES

#### 15.6.1.1 FAN COOLING

Greater heat dissipation capacity can be achieved by installing cooling fans, which are keyed on to the gearbox input shaft. Gear units HDP 60 ... HDP 90, except for configuration LD – RD – DD, and HDP 100 ... HDP 160 with lantern type motor adapter (GL/GR) may have an auxiliary fan fitted to the side opposite the drive end. Specify code **FANL** or **FANR**. On units ranging from HDP 100 to HDP 160 in the solid input shaft configuration (VP), the fan can be mounted on the right or left side irrespective of whether a drive shaft is present or not.

It is also possible to maximise the cooling capacity on HDP 100 to HDP 160 gearboxes by fitting two fans, specifying code FANLR in the order.

On the gearboxes HDP 170 and HDP 180, are used axial fans with fixed airfoil profile as standard. Along with the specification of the option FANL or FANR, the direction of rotation for the output shaft (CW or CCW) must also be specified in the order, according to the conventions given in paragraph [15.6.3](#).

This option is not available in conjunction with configurations that use the same shaft end or with MOP variant (forced lubrication with electric pump).

The increased cooling effect is shown by the thermal capacity value  $P_{TFAN}$ . See chapter [17](#). The efficiency of forced ventilation falls drastically below the drive speed of  $n_1 = 900 \text{ min}^{-1}$ . In this case, it is advisable to adopt other auxiliary cooling devices to increase the thermal capacity of the gearbox.

### 15.6.1.2 HEAT DISSIPATION THROUGH COOLING COIL

The cooling coil option **SR** is designed for integration in a cooling circuit to be provided by the installer.

For optimal efficiency the cooling circuit supply must comply with the following specifications:

- max. pressure 8 bar
- min flow rate 5 l/min for HDP 60 ... HDP 90
- min flow rate 10 l/min for HDP 100 ... HDP 140
- max. water temperature 20°C

The increased cooling effect obtained in these conditions is shown by the thermal capacity value  $P_{TSR}$ . See the section 17.

	A	B	C

### 15.6.1.3 AUXILIARY COOLING WITH AUTONOMOUS COOLING UNIT

Two types of cooling units are available, each in a range of sizes providing different cooling capacities. The two types use different cooling media for the oil: MCRW... – water/oil heat exchanger and MCRA... – air/oil heat exchanger.

If an independent cooling unit is installed on the advice of the Bonfiglioli Technical Service, no additional forced lubrication devices are required. See section 15.6.2. The following chart shows device availability according to gearbox size.

Your selection must take into account the deficit in thermal capacity that must be made up by contribution  $P_{TMCRW}$  or  $P_{TMCRA}$  as shown in the chart in section 17.

	MCRW5 MCRA5	MCRW9 MCRA9	MCRW21 MCRA21	MCRW34 MCRA34	MCRW51 MCRA51	MCRW70 MCRA70
HDP 100	X	X				
HDP 110	X	X				
HDP 120	X	X	X (*)			
HDP 125	X	X	X (**)			
HDP 130	X	X	X	X (**)		
HDP 140	X	X	X	X (**)		
HDP 150	X	X	X	X	X (**)	
HDP 160	X	X	X	X	X (**)	
HDP 170						
HDP 180						

(\*) not available for mounting position B3.

(\*\*) not available for double reduction units in the mounting position B3.

The main components of the cooling units are as follows:

**MCRW...**

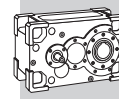

- 1) motorpump complete with by-pass circuit
- 2) filter with clogging visual indicator
- 3) water/oil heat exchanger
- 4) minimum pressure switch (only available in combination with forced lubrication)
- 5) maximum temperature thermostat
- 6) minimum temperature switch
- 7) electro-valve

**MCRA...**

- 1) motorpump complete with by-pass circuit
- 2) filter with clogging visual indicator
- 3) air/oil heat exchanger with thermostat
- 4) minimum pressure switch (only available in combination with forced lubrication)
- 5) maximum temperature thermostat

**General warnings:**

**MCRW...** : provide a water supply system that corresponds to the following specifications:

- max. pressure 10 bar
- maximum delivery temperature 20°C
- minimum flow rate  $Q_{H_2O}$  as per the chart:

	MCRW5	MCRW9	MCRW21	MCRW34	MCRW51	MCRW70
$Q_{H_2O}$ [l/min]	10	18	31	56	81	BONFIGLIOLI TECHNICAL SERVICE

**MCRA...** : leave sufficient space around the heat exchanger to ensure an unrestricted air flow.

The cooling units are mounted as shown in the figure below.

15.6.1.4 HEATERS

In very low ambient temperatures it may prove necessary to pre-heat the lubricant in the sump before start-up and/or during operation. The **HE** option envisages the installation of an electrical heating element, supplied with a thermostat to detect when the minimum temperature needed for correct operation has been reached. The wiring necessary for the thermostat must be provided by the installer.

## 15.6.2 FORCED LUBRICATION

Pattern for MANDATORY specification of forced lubrication devices.

	<b>B3</b>	<b>B6</b>	<b>B7</b>	<b>V5</b>
<b>HDP 60 ... HDP 90</b>	●	●	●	(*)
<b>HDP 100 ... HDP 180</b>	●	●	●	OP... MOP

Remark: Forced lubrication devices may be replaced, upon approval from Bonfiglioli Technical Service, by independent cooling systems, type MCR...

(\*) Forced lubrication in this case is only optionally requested, NOT MANDATORY.

### 15.6.2.1 MECHANICAL PUMP

In continuous duty applications and V5 mounting position installations, an optional forced lubrication circuit is available on request, complete with a pump keyed to the shaft end opposite the drive side. This system ensures adequate lubrication of the top bearings.

When ordering, specify the pump type - **OP1** or **OP2** to suit drive speed  $n_1$ . See the table below.

	$n_1 = 1000 \text{ min}^{-1}$	$n_1 = 1200 \text{ min}^{-1}$	$n_1 = 1500 \text{ min}^{-1}$
<b>HDP 60 ... HDP 140</b>	OP2	OP2	OP1
<b>HDP 150, HDP 160</b>	OP2	OP2	OP2
<b>HDP 170, HDP 180</b>	<b>BONFIGLIOLI TECHNICAL SERVICE</b>		

This option is not available with other configurations that use the same shaft end.

### 15.6.2.2 MOTOR PUMP

For intermittent duty applications and V5 mounting position installations, a forced lubrication circuit is available on request, complete with an independently powered motor pump. This system ensures a constant oil flow to the top bearings. Specify the **MOP** option.

Option MOP is not available if fan cooling - option FAN\_ - is also specified.

### 15.6.3 BACKSTOP DEVICE

The backstop device ensures that only one direction of rotation is allowed, and prevents the gearbox to be backdriven by the load connected to the output shaft.

In addition to verifying the shock loads shown in section 11.1, also make sure that the torque transmitted to the backstop  $M_1 = M_2 / (i \times \eta)$  is less than the admissible torque  $M_{1max}$  listed in the chart below.

The backstop is keyed to the input shaft opposite the drive end and it is accessible for inspection. Along with the specification of the backstop device, option **A**, the direction of free rotation for the output shaft (**CW** or **CCW**) must also be specified in the order. This option is not available with other configurations that use the same shaft end.

If special operating conditions require it, the user can reverse the direction of rotation of the backstop device by opening the backstop compartment and reversing the direction of the freewheel. If you need to perform this operation, contact Bonfiglioli's Technical Service for the necessary instructions. The type of backstop device used, based on centrifugally released shoes, does not require any regular maintenance.

This option is not available with other configurations that use the same shaft end.

**Under continuous operating conditions, it is advisable to maintain a neutral rotation speed  $n_{1min}$  greater than that specified in the chart in order to ensure the effective centrifugal release of all the shoes and avoid unnecessary wear.**

**For further details, contact the Bonfiglioli Technical Service.**

#### 15.6.4 REINFORCED BEARINGS

Optional heavy-duty bearings are also available, with increased overhung load capacity. The HDB option can only be applied to HDP 60 ... HDP 90 units with the LP shaft arrangement (solid shaft). Option cannot be specified along with variant DW -drywell-.

#### 15.6.5 SEALS AND GASKETS

On request, gearboxes can be equipped with different oil sealing systems. These are:

**TK** - Taconite seals are recommended for environments characterised by the presence of abrasive dust or powders. Taconite seals incorporate a combination of sealing rings, labyrinths and a grease chamber. This option is not available for HDP 60 ... HDP 90.

Greasing must be ensured as part of the scheduled maintenance programme.

**VS** – Fluoro elastomer compound seal rings.

**DS** – Dual set of seal rings at each shaft end.

**DVS** – Dual set of Fluoro elastomer compound seal rings at each shaft end.

#### 15.6.6 SENSORS

**Bimetal thermostat** – If the **TG** option is specified, a bimetallic thermostat detects when the oil temperature exceeds  $90^{\circ}\text{C} \pm 5^{\circ}\text{C}$ .

The device is supplied with the gear unit, but installation and wiring are the responsibility of the installer.

**Oil level indicator** – If the **OLG** option is specified in the order, the gearbox is supplied with a device to permit remote control of the oil level. The device best operates when the gearbox is idle and should be bypassed when the gearbox is operating. Wiring is the responsibility of the installer.

The device may not be available in combination with other accessories and/or particular product configurations. Please contact Bonfiglioli Technical Service for advise.

#### 15.6.7 DRYWELL

The Drywell device, option **DW**, guarantees proper sealing for the output shaft. It can only be applied to gearboxes in vertical mounting position V5.

When specified, it necessarily requires the installation of a forced lubrication system, selected from those available for the gearbox, as illustrated in the relevant section of this catalogue.

At scheduled intervals, check and refill the grease in the vane underneath the output shaft's bottom bearing.

The chart shows the applicability for the drywell depending on the input and output configurations.

	98.4	114.4		110.1										

### 15.6.8 FIXING ELEMENTS

For shaft-mounted installations, HDP 60 ... HDP 90 gearboxes can be fitted with an electro-welded steel torque arm, complete with anti-vibration bushing.

	A	B	C	D	E	F	R
HDP 60_TA	40	47	32	76	251	340	47
HDP 70_TA	40	47	32	76	251	375	47
HDP 80_TA	60	60	42	97	297	400	60
HDP 90_TA	60	68	42	113	338	460	68

To perform the same function, gearboxes HDP 100 and larger can be supplied with a hardened steel bolt to secure the units to the machine framework.

Vibration damping cup springs are also supplied within the kit. The customer must adjust the preload of these springs during installation, respecting the value G given in the chart below.

The reaction bolt must be fitted on the side of the gearbox next to the driven machine and in the farthest hole from output shaft centre (see dimension F in the following figure).

Fitting the bolt on same side as the inspection cover is not possible. In this case please contact Bonfiglioli Technical Service for advise.

**15.6.9 SURFACE PROTECTION****HDP 60 ... 90**

When no specific protection class is requested, the painted (ferrous) surfaces of gearboxes are protected to at least corrosivity class C2 (UNI EN ISO 12944-2). For improved resistance to atmospheric corrosion, gearboxes can be delivered with C3 and C4 surface protection, obtained by painting the complete gearbox.

**HDP 100 ... 180**

When no specific protection class is requested, the painted surfaces of gearboxes are protected to at least corrosivity class C3 (UNI EN ISO 12944-2). For improved resistance to atmospheric corrosion, gearboxes can be delivered with C4 surface protection, obtained by painting the complete gearbox.

<b>SURFACE PROTECTION</b>	Typical environments	Maximum surface temperature	Corrosivity class according to UNI EN ISO 12944-2
<b>C3</b>	Urban and industrial environments with up to 100% relative humidity (medium air pollution)	120°C	C3
<b>C4</b>	Industrial areas, coastal areas, chemical plant, with up to 100% relative humidity (high air pollution)	120°C	C4

Gearboxes with optional protection to class C3 or C4 are available in a choice of colours. If no specific colour is requested (see the “PAINTING” option) gearboxes are finished in RAL 7042. Gearboxes can also be supplied with surface protection for corrosivity class C5 according to UNI EN ISO 12944-2. Contact our Technical Service for further details.

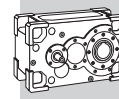

**15.6.10 PAINTING**

Gearboxes with optional protection to class C3 or C4 are available in the colours listed in the following table.

<b>PAINTING</b>	Colour	RAL number
<b>RAL7042*</b>	Traffic Grey A	7042
<b>RAL5010</b>	Gentian Blue	5010
<b>RAL9005</b>	Jet Black	9005
<b>RAL9006</b>	White Aluminium	9006
<b>RAL9010</b>	Pure White	9010

\* Gearboxes are supplied in this standard colour if no other colour is specified.

NOTE - “PAINTING” options can only be specified in conjunction with “SURFACE PROTECTION” options.

## 15.6.11 CERTIFICATES

### **AC - Certificate of compliance**

The document certifies the compliance of the product with the purchase order and the construction in conformity with the applicable procedures of the Bonfiglioli Quality System.

### **CC - Inspection certificate**

The document entails checking on order compliance, the visual inspection of external conditions and of mating dimensions. Checking on main functional parameters in unloaded conditions is also performed along with oil seal proofing, both in static and in running conditions. Units inspected are sampled within the shipping batch and marked individually.

### **CT - Type certificate**

Further to the activities relevant to the Inspection certificate the following checks are also conducted:

- noise
- surface temperature
- tightness of external hardware
- functionality of ancillary devices, if fitted

All checks are conducted with the gear unit running unloaded. Units inspected are sampled within the shipping batch and marked individually.

## 15.7 EXECUTION FOR EXTRUDER

The HDPE series is the configuration specifically developed for **single-screw extruder drive** generated from the renowned heavy duty series HDP, with which it shares most of the component parts and gearing.

Mounted forward to the sturdy nodular cast iron case, and housed into a robust extruder support, HDPE units feature a heavy duty spherical roller thrust bearing of series 294...E, exclusively sourced from primary brands.

### Design features

- Spheroidal graphite cast iron casing with universal mounting options
- Thrust bearing optimised for each application
- Radial roller bearings on the output shaft
- Customisable extruder screw/cylinder interface dimensions
- External cooling and forced lubrication units
- Lubrication shared between gearbox casing and screw box
- Fluoro elastomer compound seal rings

For more information see HDPE catalog.

## 16 REFERENCE TORQUE

The torque values given in the table are influenced by the following elements: gear teeth, shafts and couplings. Performance may therefore vary with application conditions (see the “Thermal Capacity and Rating Charts”).

— Thermal verification not necessary

## 18 MASS MOMENT OF INERTIA

Moments of inertia listed refer to gearbox input shaft and apply exclusively for configurations with a single extension input and output shaft.

To facilitate part removal in the area of the cylindrical guide opposite the shrink disc, install a machine pivot to which a self-lubricating cylindrical bushing (1) can be fitted and/or with a hole big enough to allow application of a rust treatment (2).

In the presence of external thrust loads, vibration, safety problems, requirements for enhanced reliability, or unfavourable mounting positions (e.g. V5 mounting positions, output shaft directed downwards), install suitable devices to secure the shaft in an axial direction and prevent accidental decoupling.

## PARALLEL SHAFT GEAR UNIT SERIES HDP ATEX CONFIGURATION

Selection of the the product must fit through the compilation of the selection form (see page 11). For a safe selection it is strongly recommended to rely on the long time experience of the Bonfiglioli Technical Service Dept.

### 21 INSTALLATION, USE AND MAINTENANCE

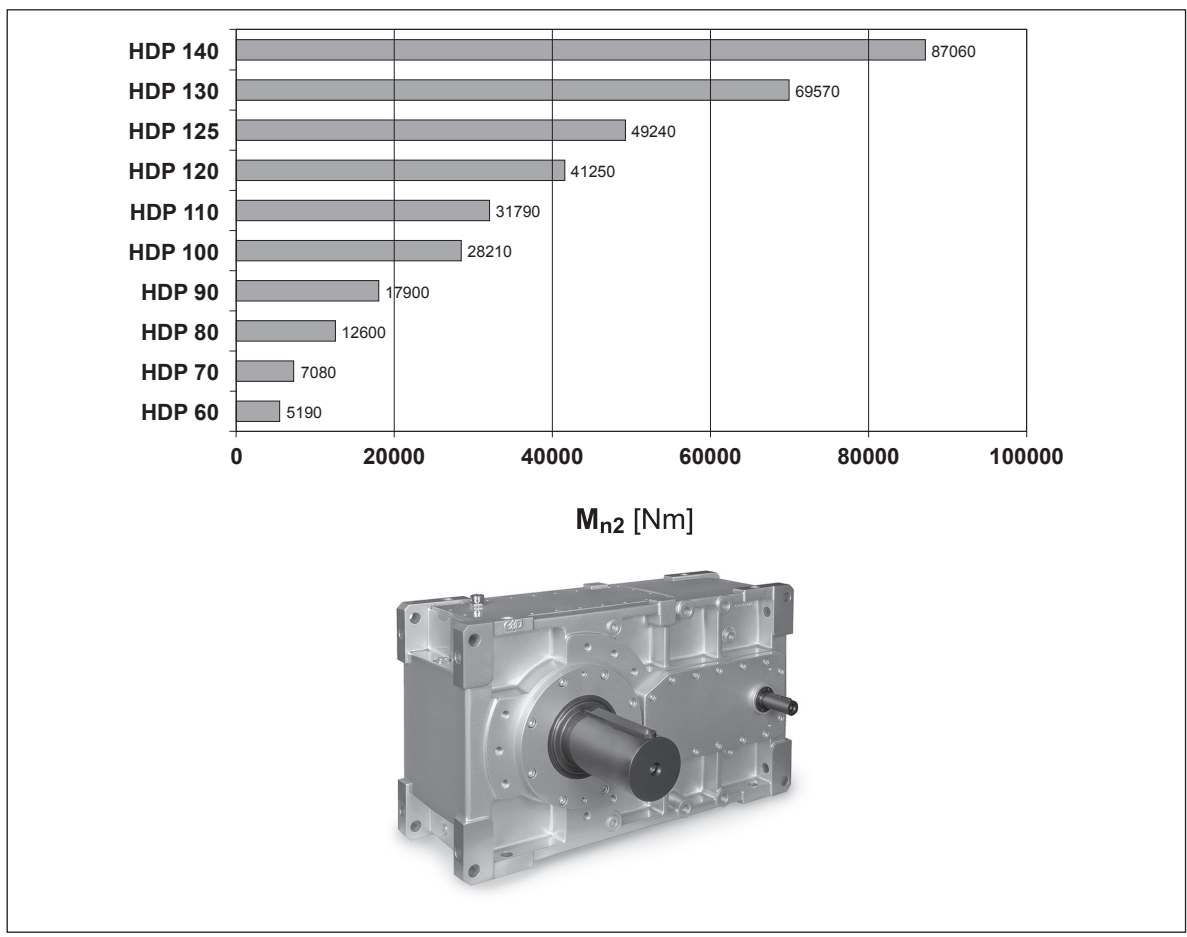

All the instructions for installation, use and maintenance of the product are given in the unit's Manual.

This can be downloaded from [www.bonfiglioli.com](http://www.bonfiglioli.com) where the manual is available in PDF format in a number of languages.

This document must be kept in a suitable place, in the vicinity of the installed gear unit, as a reference for all persons authorised to work with or on the product throughout its service life.

### 22 CONSTRUCTION OF ATEX-SPECIFIED EQUIPMENT

- Equipped with service plugs for periodic lubricant level checks.
- Equipped with vent caps with anti-intrusion valve.
- Fluoro elastomer seal rings as standard.
- No plastic component parts..
- Nameplate indication of the product category and type of protection.
- Components operable at above the operating temperature.
- Temperature indicator supplied along with each unit.

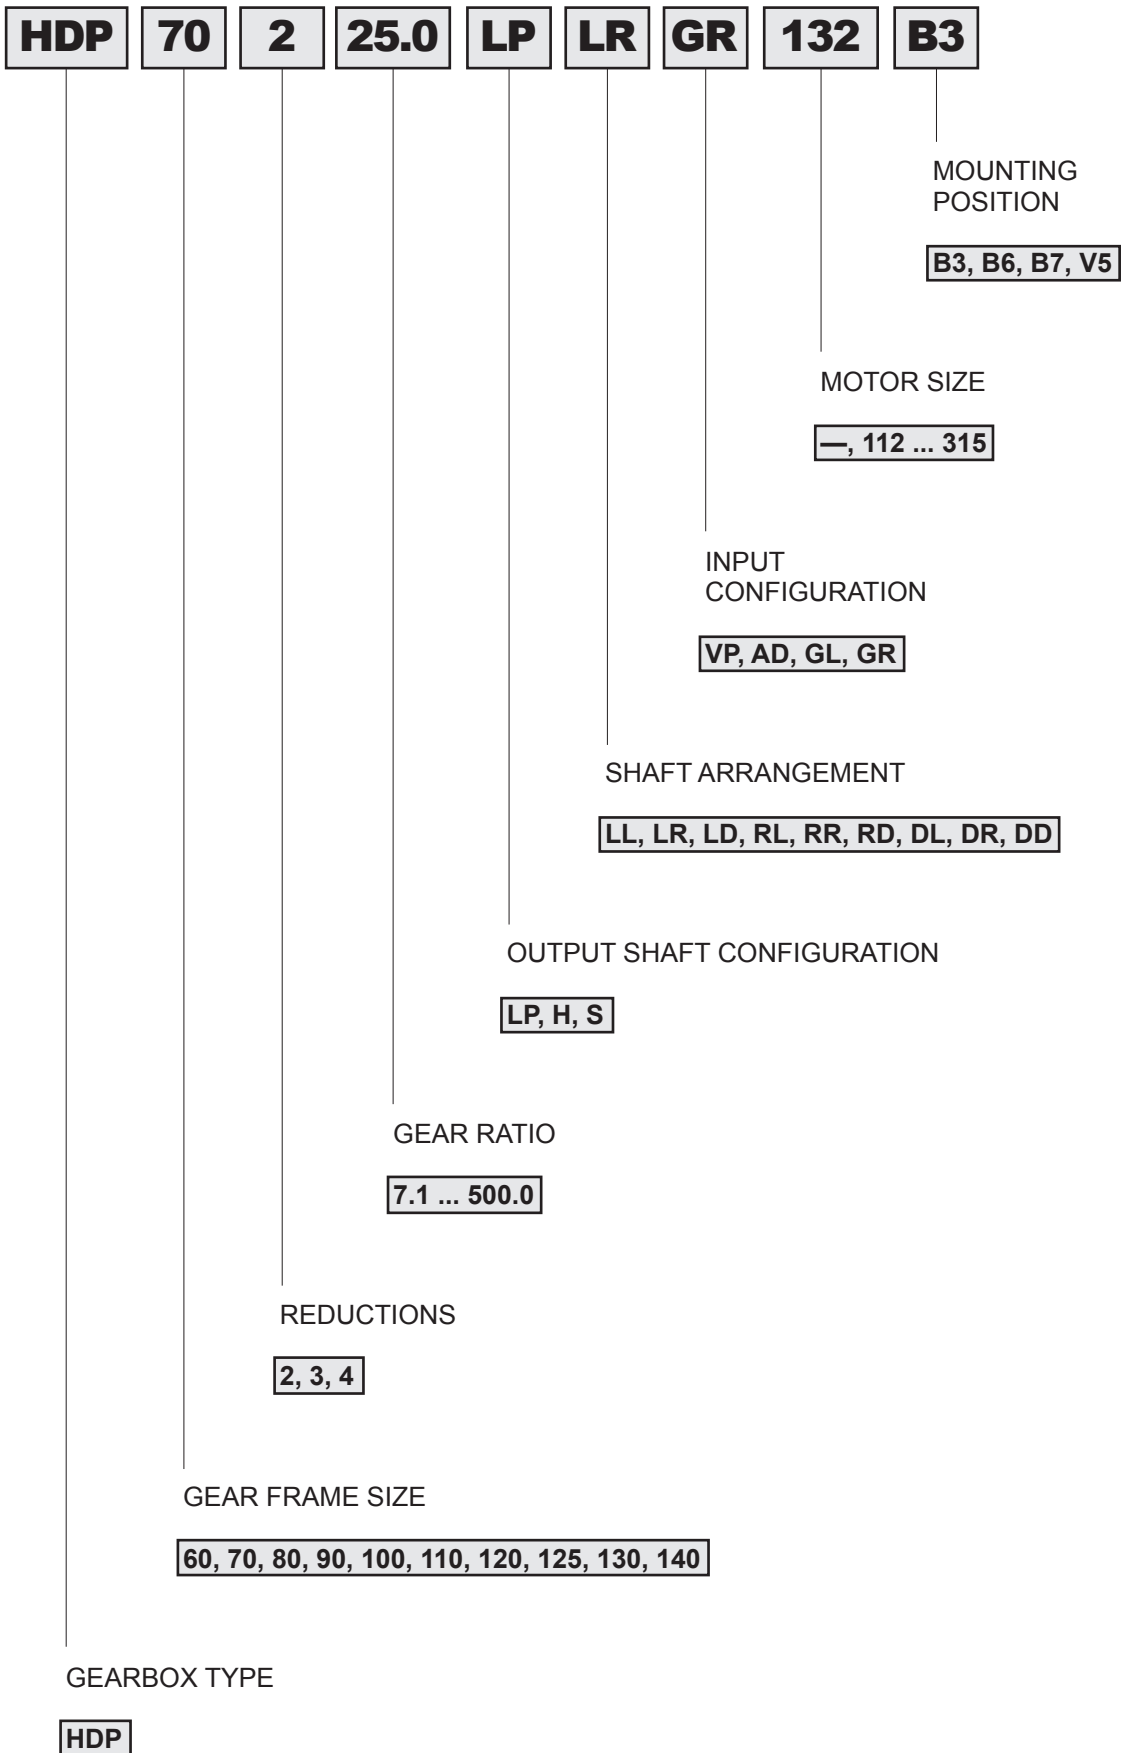

23 DESIGNATION

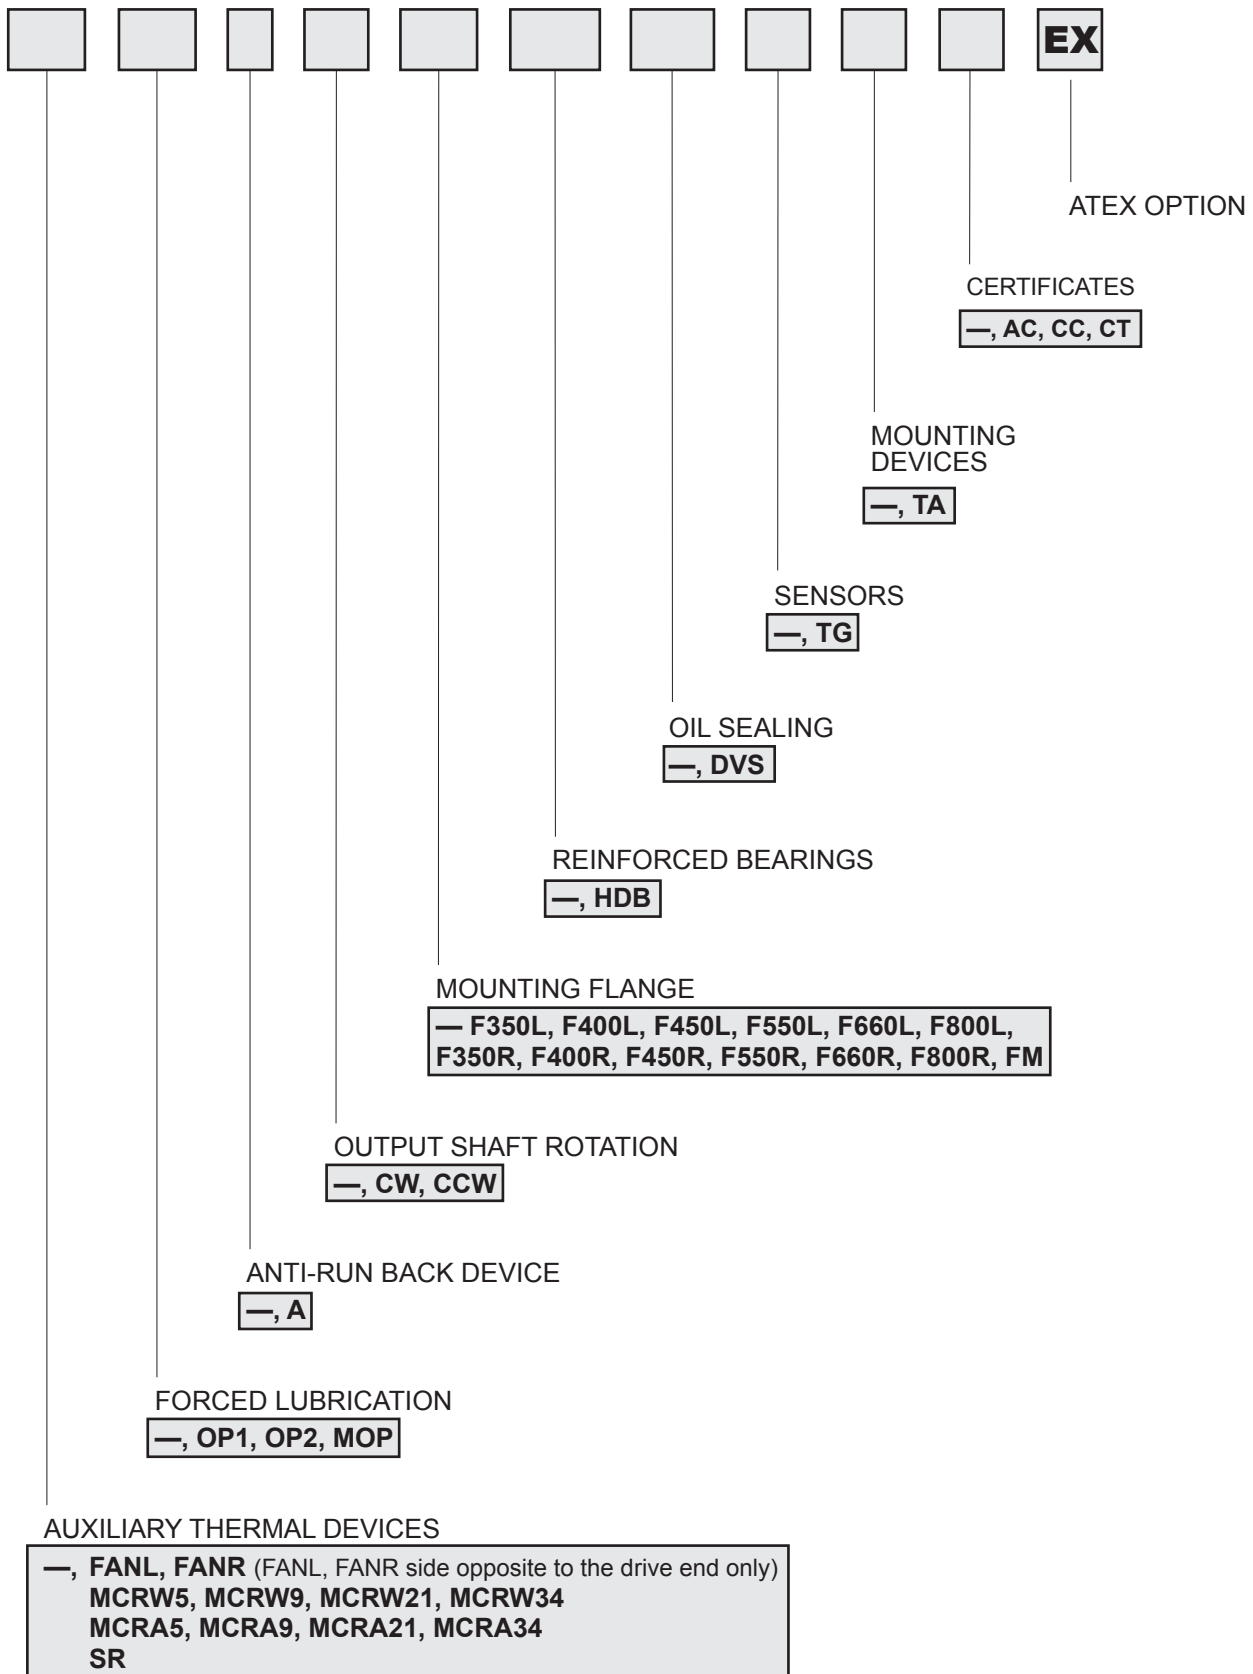

23.1 BASE VARIANTS

HDP

### 23.2 OPTIONAL VARIANTS

REMARK: The multiple selection of some of the variants may be subject to technical or dimensional constraints. Consult with the factory to have your selection approved.

### 23.3 FAN COOLING

Greater heat dissipation capacity can be achieved by installing cooling fans, which are keyed on to the gearbox input shaft. Gear units HDP 60 ... HDP 90 featuring a solid input shaft (VP) and HDP 100 ... HDP 160 with lantern type motor adapter (GL/GR) may have an auxiliary fan fitted to the side opposite the drive end. Specify code **FANL** or **FANR**.

### 24 OTHER INFORMATION ABOUT GEARBOX AND GEARMOTOR

Mounting positions, technical data, motor availability, moments of inertia and dimensions of **HDP-EX (Atex)** series don't change among equivalent **HDP** product series. All of these information can be obtained in the related chapters of this catalogue.

HDP

## BEVEL HELICAL GEAR UNITS SERIES HDO

### 25 DESIGN FEATURES

The main design features of the HDO bevel helical range are:

- 8 frame sizes: HDO 100, 110, 120, 125, 130, 140, 150 and 160, with 2, 3, and 4 reduction stages.
- 6 frame sizes: HDO 71, 81, 91, 95, 170, 180, with 3, and 4 reduction stages.
- Excellent distribution of rated torque values across the entire ratio range.
- Gear ratios with constant 12% escalation.
- HDO 71, 81, 91, 95, 100, 110, 120 and 125: monobloc casing in rigid, strong and precision machined spheroidal graphite cast iron, with internal and external paint finish. Universal mounting thanks to large number of machined and drilled surfaces. Casing shapes and thicknesses optimised by FEM analysis for superior structural rigidity, low acoustic emissions and reduced weight.
- HDO 130 ... HDO 180: spheroidal graphite cast iron or electrically-welded steel body made up of two half-casings, split along the same plane as the shafts. This design makes maintenance operations quick and economical. Casing shapes and thicknesses optimised by FEM analysis for superior structural rigidity, low acoustic emissions and reduced weight.
- Case hardened, tempered and ground finished alloyed steel bevel and helical gears, with corrected profiles for:
  - more silent operation and smoother running of input gears
  - maximum transmissible torque from final reduction stages
- Casehardened and ground finished input shafts; output shafts in extremely rigid hardened and tempered steel.

- Input shaft configurations:

Solid input shaft on same plane as or orthogonal to gear shafts, even simultaneously. Shaft end according to UNI/ISO 775-88 standards.

Provision for motor mounting with coupling bell and flexible joint.

- Output shaft configurations:

- solid, single or double-extension output shaft with ends conforming to UNI/ISO 775-88 standards

- hollow shaft with keyway

- hollow shaft with shrink disc

- Large, leading brand taper roller or self aligning roller bearings capable of withstanding high external loads.

- A wide range of gearbox customisation options available upon request, including:

- auxiliary cooling/heating devices

- forced lubrication systems

- backstop device

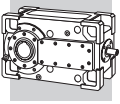

- mounting flanges or sleeves

- seals and gaskets in various types and materials

- sensors

- dry-well device for vertical shaft installations

- fixing elements

26 PRODUCT CONFIGURATIONS

26.1 BASE VARIANTS

HDO

## 26.2 OPTIONAL VARIANTS

HDO

REMARK: The multiple selection of some of the variants may be subject to technical or dimensional constraints. Consult with the factory to have your selection approved.

## 26.3 MOUNTING POSITION

If necessary, the sizes HDO 71-81-91-95 in position B3 can be used with the inspection cover on the bottom side. In this case it will be necessary for the installer to reverse the position of some plugs to ensure proper lubrication. For this operation please refer to the Operation and Maintenance Manual. This operation has to be evaluated taking into consideration its compatibility with the individual variants (fast part **J** configuration) and options (**SR, HE, TG, OLG**) by consulting our Technical Service.

## 26.4 INPUT AND OUTPUT CONFIGURATION

### 26.4.1 OUTPUT SHAFT CONFIGURATION

### 26.4.2 INPUT CONFIGURATION

On the input side the gear unit can be arranged in either one of the configurations described here after:

- **Solid input shaft**, single- or double-sided – Specify **VP**
- **Motor mounting through bell housing and flexible coupling**. The option is designated **G** or **GJ** depending on what side of the gear unit the coupling is mounted. The flexible coupling is within the scope for supply.

## 26.5 EXECUTION

## 26.6 MOTOR AVAILABILITY

The following charts list the motor/gearbox combinations that are geometrically feasible. Variants are only applicable if either an AD (direct motor mounting) or a G/GJ input configuration (coupling through bell housing and flexible coupling) were previously specified within the ordering code.

Because of standardisation, the rated power of the electric motor selected might be greater than nominal power  $P_{n1}$  of choosen gearbox. Make sure that the electric motor will never develop the extra power at any stage of the operating cycle. If you have any doubts about the validity of the application data, or uncertainty concerning the actual load pattern, install a torque limiting device or proportionally revise the applicable service factor.

## 26.7 OPTIONAL VARIANTS

### 26.7.1 AUXILIARY THERMAL DEVICES

#### 26.7.1.1 FORCED VENTILATION

Improved heat dissipation can be achieved on HDO gearboxes by keying a cooling fan on to the gearbox input shaft.

Specify the **FAN** option to have the fan installed on the shaft in the same plane. The alternative option, **FANJ**, with an orthogonally mounted fan, is only available with three stage gearboxes.

In combination with some configuration or mounting position forced ventilation may not be available along with forced lubrication devices - option OP... or MOP.

The increased cooling effect is shown by the thermal capacity value  $P_{TFAN}$  listed in section 28. This value is only significant with continuous duty applications.

The effectiveness of forced ventilation is drastically reduced in intermittent duty applications and also below drive speeds of  $n_1 = 900 \text{ min}^{-1}$ .

In such cases, other auxiliary cooling devices should be used to increase the thermal capacity of the gearbox.

### 26.7.1.2 HEAT DISSIPATION THROUGH COOLING COIL

The cooling coil option **SR** is designed for integration in a cooling circuit to be provided by the installer. For optimal efficiency the cooling circuit supply must comply with the following specifications:

- max. pressure 8 bar
- min flow rate 5 l/min for HDO 71 ... HDO 95
- min flow rate 10 l/min for HDO 100 ... HDO 140
- max. water temperature 20°C

The increased cooling effect obtained in these conditions is shown by the thermal capacity value  $P_{TSR}$ . See the section 28

### 26.7.1.3 AUXILIARY COOLING WITH AUTONOMOUS COOLING UNIT

Two types of cooling unit are available, each in a range of sizes providing different cooling capacities. The two types use different cooling media for the oil: MCRW... – water/oil heat exchanger and MCRA... – air/oil heat exchanger.

If an autonomous cooling unit is installed on the advice of the Bonfiglioli Technical Service, no additional forced lubrication devices are required. See section 26.7.2. The following chart shows device availability according to gearbox size. Your selection must take into account the deficit in thermal power that must be made up by contribution  $P_{TMCRW}$  or  $P_{TMCRA}$  as shown in the chart in section 28.

	MCRW5 MCRA5	MCRW9 MCRA9	MCRW21 MCRA21	MCRW34 MCRA34	MCRW51 MCRA51	MCRW70 MCRA70
HDO 100	X	X

HDO 140	X	X	X	X (**)		
HDO 150	X	X	X	X	X (**)	
HDO 160	X	X	X	X	X (**)	
HDO 170	BONFIGLIOLI TECHNICAL SERVICE					
HDO 180						

(\*) not available for mounting position B3.

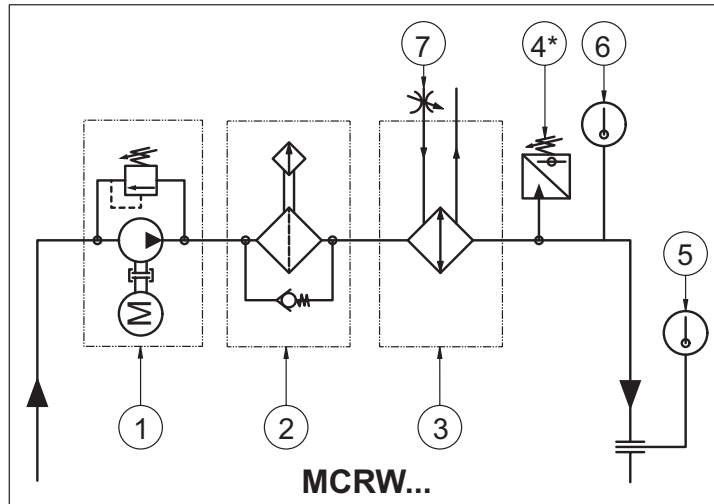

(\*\*) not available for double reduction units in the mounting position B3.

The main components of the cooling units are as follows:

**MCRW...**

- 1) motorpump complete with by-pass circuit
- 2) filter with clogging visual indicator
- 3) water/oil heat exchanger
- 4) minimum pressure switch (only available in combination with forced lubrication)
- 5) maximum temperature thermostat
- 6) minimum temperature switch
- 7) electro-valve

**MCRA...**

- 1) motorpump complete with by-pass circuit
- 2) filter with clogging visual indicator
- 3) air/oil heat exchanger with thermostat
- 4) minimum pressure switch (only available in combination with forced lubrication)
- 5) maximum temperature thermostat

**General warnings:**

**MCRW...** : provide a water supply system that corresponds to the following specifications:

- max. pressure, 10 bar
- maximum delivery temperature, 20°C
- minimum flow rate  $Q_{H_2O}$  as per the chart:

	MCRW5	MCRW9	MCRW21	MCRW34	MCRW51	MCRW70
$Q_{H_2O}$ [l/min]	10	18	31	56	81	BONFIGLIOLI TECHNICAL SERVICE

**MCRA...** : leave sufficient space around the heat exchanger to ensure an unrestricted air flow.

The cooling units are installed on the gearboxes as shown in the figure below.

26.7.1.4 HEATERS

In very low ambient temperatures it may prove necessary to pre-heat the lubricant in the sump before start-up and/or during operation. The **HE** option envisages the installation of an electrical heating element, supplied with a thermostat to detect when the minimum temperature needed for correct operation has been reached. The wiring necessary for the thermostat must be provided by the installer.

## 26.7.2 FORCED LUBRICATION

Pattern for MANDATORY specification of forced lubrication devices.

		B3	B6	B7	V5
	L R D	⊘	OP MOP	⊘	⊘
	LJ RJ DJ	OP MOP	⊘	⊘	⊘
	LD RD DD	OP MOP	OP MOP	⊘	⊘

HDO 100 ... HDO 180					
		B3	B6	B7	V5
	L R D	⊘	OP MOP	⊘	OP... MOP
	LJ RJ DJ	OP MOP	⊘	⊘	OP... MOP
	LD RD DD	OP MOP	OP MOP	⊘	OP... MOP

Remark: Forced lubrication devices may be replaced, upon approval from Bonfiglioli Technical Service, by independent cooling systems, type MCR...

### 26.7.2.1 PUMP FOR MOUNTING POSITIONS B3 and B6

In continuous duty applications and, when required, for B3 or B6 mounting positions (see section [26.7.2](#)), an optional forced lubrication circuit is available with a mechanically driven pump keyed on to the intermediate shaft.

This circuit only guarantees lubrication of the top bearings that are not immersed in oil.

Before specifying the OP option in your order, check the chart to make sure that the device is fully compatible with the drive speed  $n_1$  and reduction ratio. See the following diagram.

### 26.7.2.2 PUMP FOR MOUNTING POSITION V5

In continuous duty applications and with V5 mounting positions version 1 (version 2 for 4-stage HDO 150 ... HDO 180), an optional forced lubrication circuit is available with a mechanically driven pump keyed on to the intermediate shaft.

This circuit only guarantees lubrication of the top bearings that are not immersed in oil. If this device is required in conjunction with the Drywell device, consult the Bonfiglioli Technical Service.

When ordering, specify the OP1 or OP2 option in your order after first checking the chart to make sure that the device is fully compatible with drive speed  $n_1$  and the reduction ratio. See the following diagram.

### 26.7.2.3 ELECTRIC PUMP FOR MOUNTING POSITIONS B3 and B6

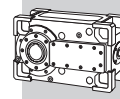

In intermittent duty applications, if speeds are incompatible with the use of the OP pump option, and when required for B3 and B6 mounting positions (see section 26.7.2), the MOP optional forced lubrication circuit is available with an independently powered electric pump. This system ensures a constant flow of oil to the top bearings.

The electric pump arrangements shown above are purely indicative. Pump positions may vary depending on the presence of other options at the same time.

Contact the Bonfiglioli Technical Service for overall dimensions.

### 26.7.3 BACKSTOP DEVICE

The backstop device ensures that only one direction of rotation is allowed, and prevents the gearbox to be backdriven by the load connected to the output shaft.

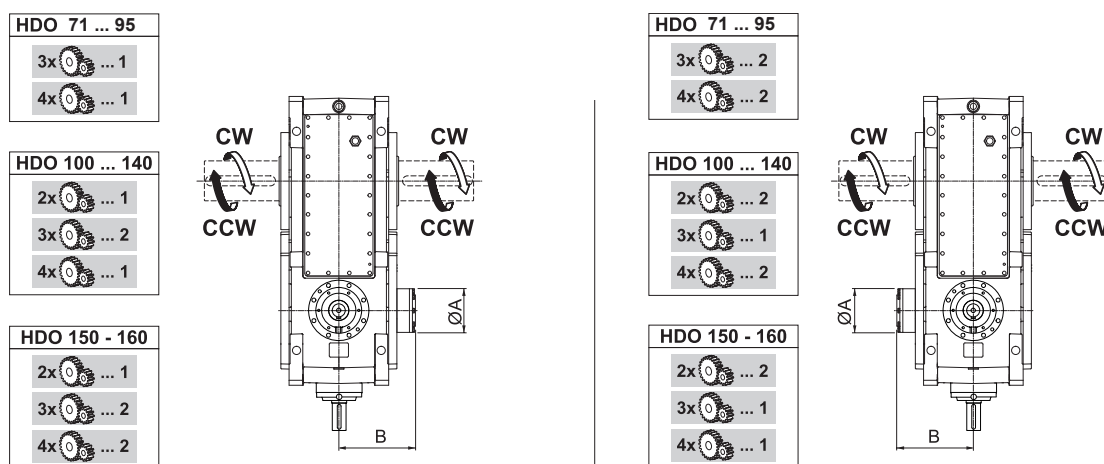

In addition to verifying the shock loads shown in section 11.1, also make sure that the torque transmitted to the backstop  $M_1 = M_2 / (i \times \eta)$  is less than the admissible torque  $M_{1max}$  listed in the chart below. Along with the specification of the backstop device, option **A**, the direction of free rotation for the output shaft (**CW** or **CCW**) must also be specified in the order.

If special operating conditions require it, the user can reverse the direction of rotation of the backstop device by opening the backstop compartment and reversing the direction of the freewheel. If you need to perform this operation, contact Bonfiglioli's Technical Service for the necessary instructions. The type of backstop device used, based on centrifugally released shoes, does not require any regular maintenance.

This option is not available with other configurations that use the same shaft end.

**Under continuous operating conditions, it is advisable to maintain a neutral rotation speed  $n_{1min}$  greater than that specified in the chart in order to ensure the effective centrifugal release of all the shoes and avoid unnecessary wear. For further details, contact the Bonfiglioli Technical Service.**

#### 26.7.4 REINFORCED BEARINGS

Optional heavy-duty bearings are also available, with increased overhung load capacity. The HDB option can only be applied to HDO 71, 81, 91 units with the LP shaft arrangement (solid shaft).

#### 26.7.5 SEALS AND GASKETS

On request, gearboxes can be equipped with different oil sealing systems. These are:

**TK** – Taconite seals are recommended for environments characterised by the presence of abrasive dust or powders. Taconite seals incorporate a combination of sealing rings, labyrinths and a grease chamber. Greasing must be ensured as part of the scheduled maintenance programme.

**VS** – Fluoro elastomer compound seal rings.

**DS** – Dual set of seal rings at each shaft end.

**DVS** – Dual set of Fluoro elastomer compound seal rings at each shaft end.

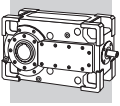

#### 26.7.6 SENSORS

**Bimetal thermostat** – If the **TG** option is specified, a bimetallic thermostat detects when the oil temperature exceeds  $90^{\circ}\text{C} \pm 5^{\circ}\text{C}$ .

The device is supplied with the gear unit, but installation and wiring are the responsibility of the installer.

**Oil level indicator** – If the **OLG** option is specified in the order, the gearbox is supplied with a device permitting the remote checking of the oil level. The device best operates when the gearbox is idle and should be bypassed when the gearbox is operating. Wiring is the responsibility of the installer.

The device may not be available in combination with other accessories and/or particular product configurations. Please contact Bonfiglioli Technical Service for advise.

### 26.7.7 DRYWELL

The “drywell” - option **DW** - is a device providing output shaft sealing for units with output shaft laying vertically in the V5 position.

The “drywell” - option is not available for HDO 71 to 95 gearboxes.

When specified, for HDO 100 to 180 gearboxes, it necessarily requires the installation of a forced lubrication system, selected from those available for the gearbox, as illustrated in the relevant section of this catalogue.

At scheduled intervals, check and refill the grease in the vane underneath the output shaft's bottom bearing.

Availability of the Drywell may be subject to limitations, depending on the contemporary specification of other devices. Please consult with Bonfiglioli Technical Service.

HDO

### 26.7.8 FIXING ELEMENTS

For shaft-mounted installations, **HDO 71 ... HDO 95** gearboxes can be fitted with an electro-welded steel torque arm, complete with anti-vibration bushing.

	A	B	C	D	E	F	R
<b>HDO 71_TA</b>	40	47	32	76	251	375	47
<b>HDO 81_TA</b>	60	60	42	97	297	413	60
<b>HDO 91_TA</b>	60	68	42	113	338	525	68
<b>HDO 95_TA</b>	60	68	42	113	363	520	68

For shaft mounted HDO gearboxes, a specially shaped hardened steel bolt is available to secure the unit to the supporting structure.

Vibration damping cup springs are also supplied in the kit. The customer must adjust the preload of these springs during installation, respecting the value G given in the following chart.

The reaction bolt must be fitted on the side of the gearbox next to the driven machine and in the farthest hole from output shaft centre (see dimension F in the following figure).

Fitting the bolt on same side as the inspection cover is not possible. In this case please contact Bonfiglioli Technical Service for advise.

## 26.7.9 SURFACE PROTECTION

### HDO 71 ... 95

When no specific protection class is requested, the painted (ferrous) surfaces of gearboxes are protected to at least corrosivity class C2 (UNI EN ISO 12944-2). For improved resistance to atmospheric corrosion, gearboxes can be delivered with C3 and C4 surface protection, obtained by painting the complete gearbox.

<b>SURFACE PROTECTION</b>	Typical environments	Maximum surface temperature	Corrosivity class according to UNI EN ISO 12944-2
<b>C3</b>	Urban and industrial environments with up to 100% relative humidity (medium air pollution)	120°C	C3
<b>C4</b>	Industrial areas, coastal areas, chemical plant, with up to 100% relative humidity (high air pollution)	120°C	C4

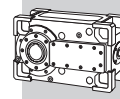

Gearboxes with optional protection to class C3 or C4 are available in a choice of colours. If no specific colour is requested (see the "PAINTING" option) gearboxes are finished in RAL 7042. Gearboxes can also be supplied with surface protection for corrosivity class C5 according to UNI EN ISO 12944-2. Contact our Technical Service for further details.

### HDO 100 ... 180

When no specific protection class is requested, the painted surfaces of gearboxes are protected to at least corrosivity class C3 (UNI EN ISO 12944-2). For improved resistance to atmospheric corrosion, gearboxes can be delivered with C4 surface protection, obtained by painting the complete gearbox.

<b>SURFACE PROTECTION</b>	Typical environments	Maximum surface temperature	Corrosivity class according to UNI EN ISO 12944-2
<b>C4</b>	Industrial areas, coastal areas, chemical plant, with up to 100% relative humidity (high air pollution)	120°C	C4

Gearboxes with optional protection to class C4 are available in a choice of colours. If no specific colour is requested (see the "PAINTING" option) gearboxes are finished in RAL 7042. Gearboxes can also be supplied with surface protection for corrosivity class C5 according to UNI EN ISO 12944-2. Contact our Technical Service for further details.

## 26.7.10 PAINTING

Gearboxes with optional protection to class C3 or C4 are available in the colours listed in the following table.

PAINTING	Colour	RAL number
<b>RAL7042*</b>	Traffic Grey A	7042
<b>RAL5010</b>	Gentian Blue	5010
<b>RAL9005</b>	Jet Black	9005
<b>RAL9006</b>	White Aluminium	9006
<b>RAL9010</b>	Pure White	9010

\* Gearboxes are supplied in this standard colour if no other colour is specified.

NOTE - "PAINTING" options can only be specified in conjunction with "SURFACE PROTECTION" options.

## 26.7.11 CERTIFICATES

### AC - Certificate of compliance

The document certifies the compliance of the product with the purchase order and the construction in conformity with the applicable procedures of the Bonfiglioli Quality System.

### CC - Inspection certificate

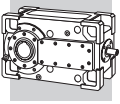

The document entails checking on order compliance, the visual inspection of external conditions and of mating dimensions. Checking on main functional parameters in unloaded conditions is also performed along with oil seal proofing, both in static and in running conditions. Units inspected are sampled within the shipping batch and marked individually.

### CT - Type certificate

Further to the activities relevant to the Inspection certificate the following checks are also conducted:

- noise
- surface temperature
- tightness of external hardware
- functionality of ancillary devices, if fitted

All checks are conducted with the gear unit running unloaded. Units inspected are sampled within the shipping batch and marked individually.

HDO

## 27 REFERENCE TORQUE

The torque values given in the table are influenced by the following elements: gear teeth, shafts and couplings. Performance may therefore vary with application conditions (see the “Thermal Capacity and Rating Charts”).

To facilitate part removal in the area of the cylindrical guide opposite the shrink disc, install a machine pivot to which a self-lubricating cylindrical bushing (1) can be fitted and/or with a hole big enough to allow application of a rust treatment (2). In the presence of external thrust loads, vibration, safety problems, requirements for enhanced reliability, or unfavourable mounting positions (e.g. V5 mounting positions, output shaft directed downwards), install suitable devices to secure the shaft in an axial direction and prevent accidental decoupling.

## BEVEL HELICAL GEAR UNITS SERIES HDO ATEX CONFIGURATION

Selection of the the product must fit through the compilation of the selection form (see page 11). For a safe selection it is strongly recommended to rely on the long time experience of the Bonfiglioli Technical Service Dept.

### 32 INSTALLATION, USE AND MAINTENANCE

All the instructions for installation, use and maintenance of the product are given in the unit's Manual.

This can be downloaded from [www.bonfiglioli.com](http://www.bonfiglioli.com) where the manual is available in PDF format in a number of languages.

This document must be kept in a suitable place, in the vicinity of the installed gear unit, as a reference for all persons authorised to work with or on the product throughout its service life.

### 33 CONSTRUCTION OF ATEX-SPECIFIED EQUIPMENT

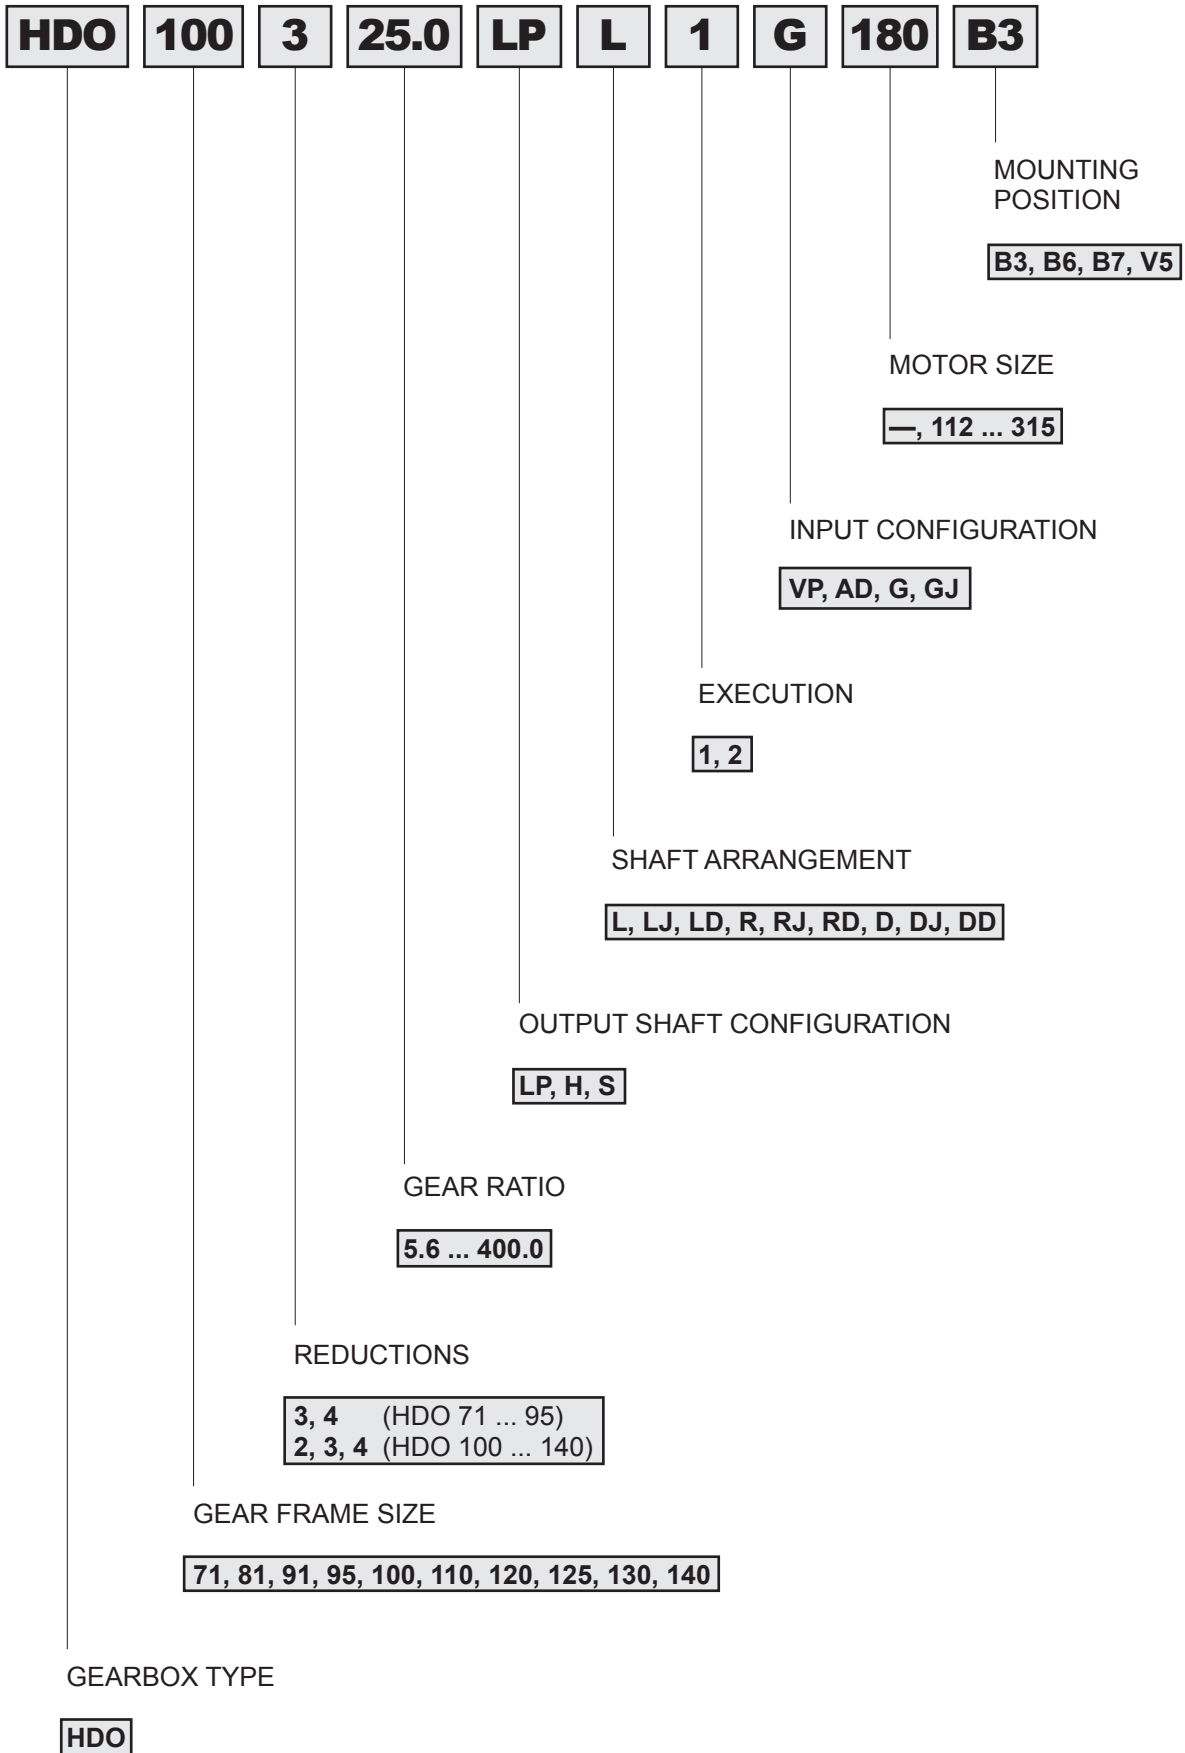

- Equipped with service plugs for periodic lubricant level checks.
- Equipped with vent caps with anti-intrusion valve.
- Fluoro elastomer seal rings as standard.
- No plastic component parts..
- Nameplate indication of the product category and type of protection.
- Components operable at above the operating temperature.
- Temperature indicator supplied along with each unit.

34 DESIGNATION

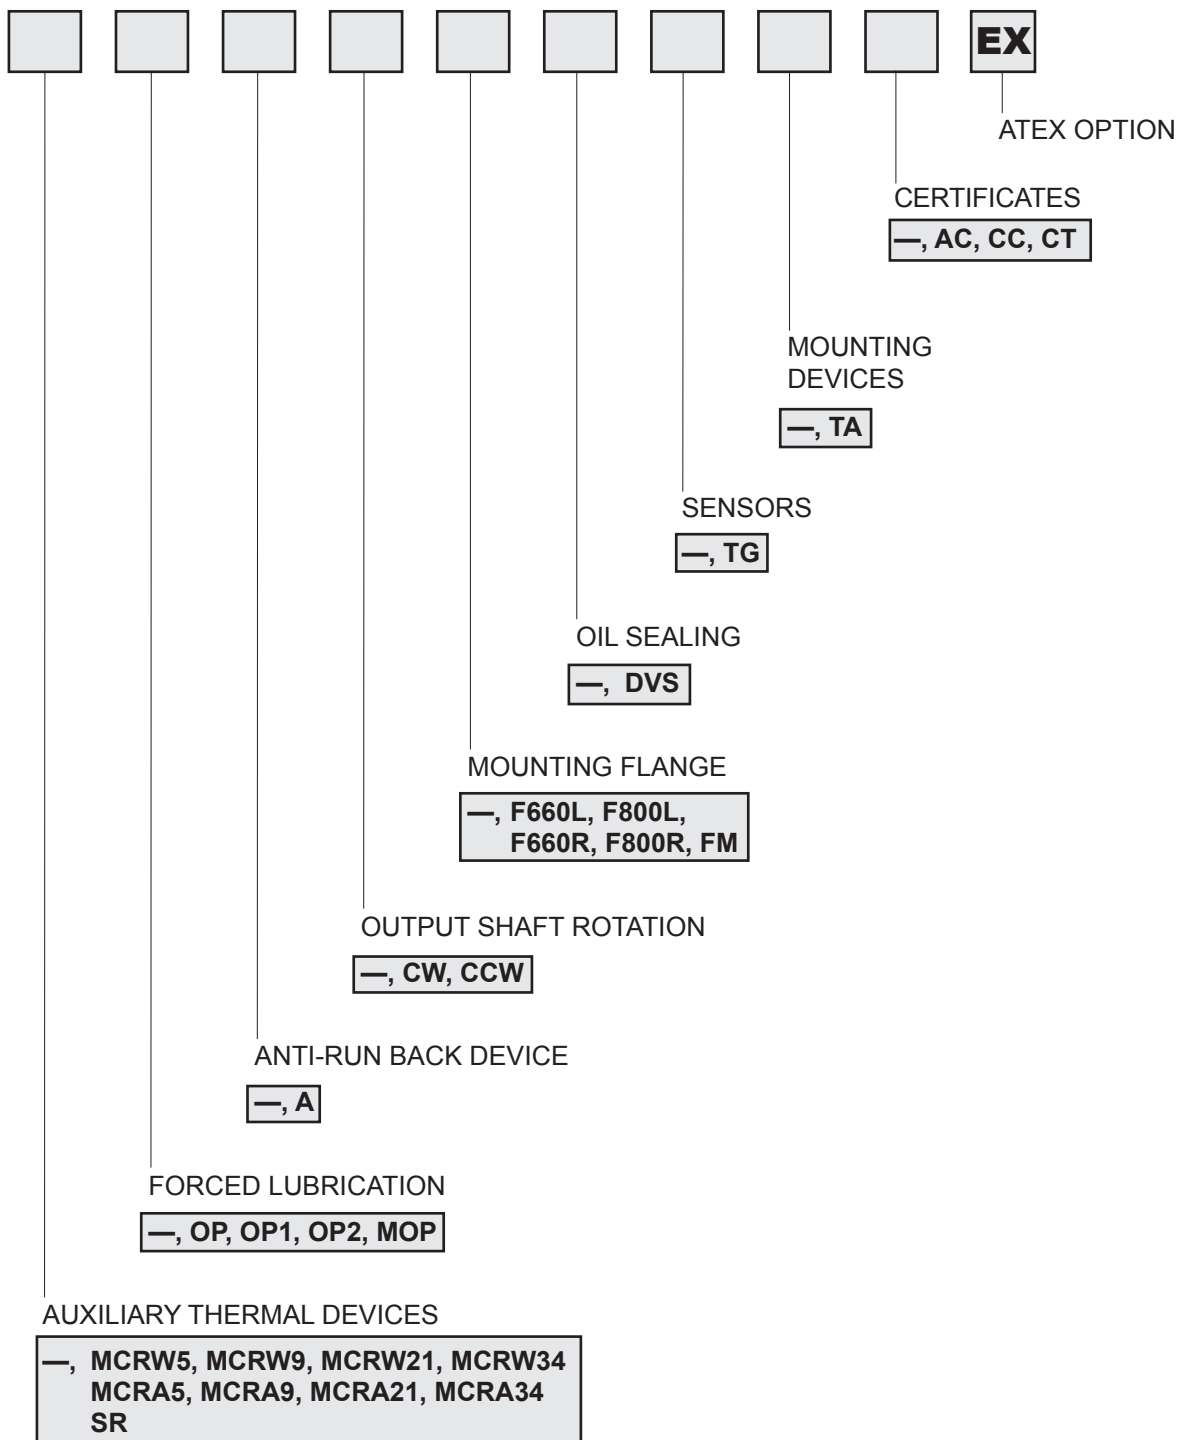

34.1 BASE VARIANTS

HDO

### 34.2 OPTIONAL VARIANTS

**HDO**

REMARK: The multiple selection of some of the variants may be subject to technical or dimensional constraints. Consult with the factory to have your selection approved.

### 35 OTHER INFORMATION ABOUT GEARBOX AND GEARMOTOR

Mounting positions, technical data, motor availability, moments of inertia and dimensions of **HDO-EX (Atex)** series don't change among equivalent **HDO** product series. All of these information can be obtained in the related chapters of this catalogue.

## INDEX OF REVISIONS

BR_CAT_HDPO_STD_ENG_R05_3	
	Description
37	Updated the "Fan cooling" paragraph.
...	Added new gearboxes HDO 71 ... HDO 95.
192	Amended table "Input configuration GJ".
227	Amended technical data for HDO 91 at speed $n_1 = 1000 \text{ min}^{-1}$ .

2018\_05\_30

This publication supersedes and replaces any previous edition and revision. We reserve the right to implement modifications without notice.

This catalogue cannot be reproduced, even partially, without prior consent.

We have a relentless commitment to excellence, innovation and sustainability. Our team creates, distributes and services world-class power transmission and drive solutions to keep the world in motion.
